Issue with Polymath

Token Studio is a self-service application that allows users to create, issue, and manage security tokens through a simple, intuitive interface. Like any piece of tech, it relies on the user to set the terms and rules that need to be enforced. Polymath doesn't provide any guidance or services around the issuing, buying or selling of securities.

Learn more

We searched the globe and selected Polymath to be our tokenization platform because the people are great and know what they are doing. From our first Blockchain conference, the team was extremely helpful in breaking down the process to me in a simple way, without the technical jargon you often find in blockchain. We still remain with Polymath because their innovation continues to grow with our needs. It's awesome that I can spend my time on business development, knowing Polymath is focused on building next level technology relevant for our success.

RedSwan CRE Marketplace

Introducing Polymesh

Polymesh, a blockchain built for security tokens, will be going live in March 2021. Get a behind-the-scenes look at the brand-new Token Studio in this quick 3-minute demo.

WHY POLYMATH

Driving efficient capital markets

We relentlessly focus on the technological backbone for security tokens. Whether configuring tokens using the Polymath Token Studio or integrating our broker-dealer toolkit into your offering, Polymath's

technology brings efficiency and transparency to security token management.

Open source.

Transparency is at the core of all Polymath products.

Standardized.

ERC1400 standard ensures the token's code meets specific requirements in order to minimize technical due diligence. Learn more →

Modular.

Build tokens your way, for your jurisdictions. Polymath modules let you customize your offering, manage your token, and provide corporate actions.

Automated.

Polymath lets issuers set rules around who can hold their token, how it can be transferred and other jurisdictional requirements. From there, the system will automate rule enforcement.

End-to-end.

Polymath's self-serve token creation and management technology integrates smoothly with a large ecosystem of custodians, broker-dealers, legal firms, cap table management providers, token sale platforms, KYC/AML providers and others so that issuers can create a bespoke end-to-end solution.

Purpose-built. Coming Soon

Polymesh is an institutional-grade blockchain built specifically for security tokens that solves the inherent challenges with public infrastructure around identity, compliance, confidentiality, and governance. Learn more →

Ready to use Polymath?

Bring easy creation, issuance, and management of security tokens to your clients.
